DEALFLOW360 · FRONTEND VERIFICATION

Demo Verification Walkthrough

A step-by-step browser script for verifying the complete quotation-to-cash workflow using the seeded demo personas.

Frontend
http://127.0.0.1:3001

API
http://127.0.0.1:8080

Prepared
11 November 2026

Starting point
Clean transactional data

STARTING STATE

0 quotations · **0** approvals · **0** orders · **0** invoices

One genuine low-stock alert: **EAST** warehouse, **LAPTOP-14**. The first new quotation is **Q-1000**; the first order is **SO-1000**; the first invoice is **INV-1000**.

This guide creates real demo data through the UI. Do not run the Playwright suite while using it.

Before you start

Use a desktop browser at least 1280px wide. At widths below 1536px the policy, totals and gates live behind the **Totals & policy** button; at wider widths they sit in the right-hand rail.

What this walkthrough covers

1. Landing page, sign-in and the role-based navigation
2. `Q-1000` — within-policy quotation through to order, invoice, payment and dispatch
3. `Q-1001` — 30% discount, manager step 1 then finance step 2
4. `Q-1002` — customer counteroffer, seller adoption and acceptance
5. Deal health, policy, reports, notifications and inventory
6. Permission and negative checks

Demo personas

Persona	Email	Use for
Rep A (Sales)	`rep.a@dealflow.demo`	Creates and owns the Alpha Traders deals
Manager A	`manager.a@dealflow.demo`	Approval step 1
Finance Ops	`finance@dealflow.demo`	Approval step 2, billing, dispatch, jobs
Alpha Buyer	`alpha@customer.demo`	Customer deal room, negotiation and acceptance
Demo Admin	`admin@dealflow.demo`	Full-access checks and administration

How to sign in and switch personas

1. On `/sign-in`, click **Use a demo persona**, then click the persona card. No password is needed.
2. If the persona chooser is absent, enter the email and any non-empty password, then click **Sign in**.
3. To switch users, click **Switch persona** in the header (demo sessions only), or open the avatar menu and choose **Sign out**. Navigating to `/sign-in` while signed in redirects you away.

What each role sees

Role	Navigation and capabilities
Sales Rep	Today, Quotations, Customers, Approvals, Questions, Orders, Billing, Reports, Deal health, Discount policy. Can create, edit their own, submit, share and adopt. Cannot approve, run jobs, or administer.
Manager	Adds Inventory and Catalogue; approval step 1, team reports, alert nudges. Cannot edit quotation terms or run jobs.
Finance	Adds Inventory, Jobs and all-company reports. Approval step 2, payments, refunds, stock receipts, dispatch.
Customer	Overview, Quotations, Invoices, Catalogue. Can counter, message and accept. Never sees margin, cost, contribution or policy data.

> **Numbering:** references come from database sequences. If you cancel or recreate a record, the next reference advances. Always follow the reference shown on screen rather than assuming an exact number.

0 Landing and role tour

Confirm the public entry point and that each persona gets the correct workspace.

1. Open **http://127.0.0.1:3001**.

   > ✓ **Expected:** the marketing landing page is the first screen. The route `/landing` is not used.

2. Click **Sign in** and sign in as **Rep A (Sales)**.

   > ✓ **Expected:** you land on `/admin` ("Today"). The sidebar shows Today, Quotations, Customers, Approvals, Questions, Orders, Billing, Reports, Deal health and Discount policy. Inventory, Catalogue, People and Jobs are absent for a rep.

3. Open the avatar menu.

   > ✓ **Expected:** it shows "Rep A (Sales)", the **Sales Rep** role and a **Demo persona** badge. This is also where you sign out.

4. Briefly switch to **Manager A**, **Finance Ops** and **Alpha Buyer** and compare the navigation and landing route.

Persona	What changes
Manager A	Sees team quotations and approvals; additional Inventory and Catalogue. No Jobs or People.
Finance Ops	Sees all quotations, approvals step 2, Inventory, Billing, Reports, Catalogue, Discount policy and Jobs.
Alpha Buyer	Customer shell only: Overview, Quotations, Invoices and Catalogue, with account settings under the avatar.

1 `Q-1000` — within policy, full order-to-cash

The main happy path: create a quotation, price it, submit it, adopt it, share it, let the customer accept, then verify the order, invoice, payment and dispatch.

1. Create the quotation

1. As **Rep A**, go to **Quotations** → **New quotation**.
2. Fill in:
   - **Customer:** `Alpha Traders · BRONZE`
   - **Title:** `Demo — within policy`
   - **Valid until:** keep the default (+30 days)
3. Click **Create and open**.

> ✓ **Expected:** the deal workspace opens as **Q-1000**, stage **Draft**, version **1**. The line table is empty and the next-step banner asks for products.

2. Add a line and save

4. In the **Quote** tab, click **Add a line**.
5. Search for `Business Laptop`, click the product, then choose **Business Laptop 14"** (`LAPTOP-14`).

> ✓ **Expected:** one one-time line at quantity 1 and 0% line discount. The action bar shows **Unsaved changes**.

6. Click **Save terms**.

> ✓ **Expected:** toast “Saved as version 1”. The server re-prices and re-runs the policy check.

7. Click **Totals & policy** (or use the right-hand rail at wide widths).

> ✓ **Policy check:** Within policy, with no approval reasons and an explicit statement that no manager or finance step was created.
> ✓ **Gates:** Seller agreement not met; Internal approval “Within policy — no approval was required”; Customer acceptance not met.

3. Submit, adopt and share

8. Click **Submit for approval**.

> ✓ **Expected:** the toast confirms that the terms are within policy and no approval step was created. The stage becomes **In review**. The submit button becomes **Submitted** and is disabled — duplicate submission is blocked.

9. Open the **Approvals** tab.

> ✓ **Expected:** “No approval step exists for this version.”

10. Click **Adopt terms** in the action bar.

> ✓ **Expected:** toast “Terms adopted”; the Seller agreement gate becomes met.

11. Click **Share customer portal**.

> ✓ **Expected:** toast “Shared with the customer”, stage **Shared with customer**, and a **Customer link** panel with a **Copy** button.

4. Customer accepts

12. Switch to **Alpha Buyer**.
13. Go to **Quotations** and open **Q-1000**, or paste the copied customer link.

> ✓ **Expected:** the deal room shows version 1 and customer-facing prices only. It does not mention margin, cost, contribution, ceiling or policy version.

14. Click **Accept & confirm**.
15. In the dialog “Accept version 1?”, click **Yes, accept these terms**.

> ✓ **Expected:** the page shows **Order confirmed** and reference **SO-1000**.

5. Verify the order, invoice and payment

16. Switch back to **Rep A** → **Orders**.

> ✓ **Expected: SO-1000** is listed for Alpha Traders.

17. Open **SO-1000**.

> ✓ **Expected:** the order is confirmed and the **Fulfilment** tab shows the warehouse allocation and at least one shipment.

18. Switch to **Finance Ops** → **Billing**.
19. Choose **Alpha Traders** in the customer dropdown.

> ✓ **Expected:** the **Invoices** tab shows **INV-1000**, raised automatically from the order.

20. Open **INV-1000** and note its **Total**.

> ✓ **Expected:** net, tax, total, paid and outstanding are consistent. Outstanding equals total before payment.

21. Back on Billing, click **Record a receipt**.
    - **Amount received:** the invoice total
    - **Method:** leave the default
    - **External reference:** e.g. `DEMO-UTR-1`
    - Leave the allocation boxes empty — the server applies the receipt oldest due first.
22. Click **Record receipt**.

> ✓ **Expected:** a receipt reference such as **PAY-1000**; the **Receipts** tab lists it and the invoice’s **Outstanding** becomes zero.

23. Optional customer check: switch to **Alpha Buyer** → **Invoices** → **INV-1000**.

> ✓ **Expected:** the customer sees the same paid and outstanding figures.

6. Dispatch and stock

24. As **Finance Ops**, go to **Orders** → **SO-1000** → **Fulfilment**.
25. On the shipment card, click **Record dispatch**.
26. Add a **Tracking reference** (e.g. `TRK-1000`), then click **Record dispatch** again.

> ✓ **Expected:** the shipment shows a dispatched timestamp and tracking reference. Its quantities are protected from re-allocation.

2 `Q-1001` — 30% discount, manager → finance

This is the approval path. Alpha Traders is **BRONZE** (5% tier ceiling) and **SETUP** is a **SERVICE** (10% category ceiling). A **30% line discount** therefore breaches policy and requires both approval steps.

WHY THIS EXACT COMBINATION

Policy value	Effect
Bronze tier ceiling	5% maximum unconditional discount
Service category ceiling	10% maximum unconditional discount
Manager trigger	Any positive excess over a ceiling
Finance trigger	Worst line at least 8 percentage points over its ceiling
30% on SETUP	20 points over the service ceiling → **MANAGER_FINANCE**

1. Create and submit

1. As **Rep A**, go to **Quotations** → **New quotation**.
2. Choose **Alpha Traders · BRONZE**, title `Demo — 30% approval`, then click **Create and open**.

> ✓ **Expected:** reference **Q-1001**.

3. Click **Add a line** → search `On-site Setup` → choose **On-site Setup** (`SETUP-STD`).
4. In the **Line disc.** cell for that row, type **30** (not `0.3`) and press Tab or Enter.

> ✓ **Expected:** after the short debounce, the policy panel shows **Steps 1 & 2 — manager, then finance**. The reasons mention the discount exceeding the ceiling and the excess value.

5. Click **Save terms** → toast “Saved as version 1”.
6. Click **Submit for approval**.

> ✓ **Expected:** toast “Steps 1 & 2 — manager, then finance · the approver has been notified.” Stage **In review**. The next-step banner names **step 1 manager**.

7. Open the **Approvals** tab.

> ✓ **Expected: Step 1 · Manager — Pending** and **Step 2 · Finance — Pending** (visible but locked).

2. Prove finance cannot skip the manager

8. Switch to **Finance Ops** → **Approvals**.
9. Keep the filter on **Pending** and find **Q-1001**.

> ✓ **Expected:** the row is visible, but **Decide** is disabled and the row says "Waiting for the manager step to be approved first."

3. Manager approves step 1

10. Switch to **Manager A** → **Approvals**.
11. Find **Q-1001** and click **Decide**.
12. Keep **Decision** as **Approve — release the next step or the gate**; optionally add a reason; click **Approve**.

> ✓ **Expected:** "Approve recorded"; the card leaves the pending queue.

4. Finance approves step 2

13. Switch back to **Finance Ops** → **Approvals**.
14. Find **Q-1001**; **Decide** is now enabled.
15. Click **Decide** → keep **Approve** → optionally add a reason → **Approve**.

> ✓ **Expected:** finance approval is recorded and the internal approval gate is cleared.

5. Complete the sale

16. Switch to **Rep A** → **Quotations** → **Q-1001**.

> ✓ **Expected:** the **Approvals** tab shows both steps approved; the policy panel shows the route complete.

17. Click **Adopt terms**, then **Share customer portal**.
18. Switch to **Alpha Buyer** → **Quotations** → **Q-1001** → **Accept & confirm** → **Yes, accept these terms**.

> ✓ **Expected:** order **SO-1001** is created.

19. Verify **Orders** → **SO-1001** and **Billing** → **Alpha Traders** → **INV-1001**.

> ✓ **Expected:** the invoice amount reflects the 30%-discounted SETUP service.

3 `Q-1002` — customer counteroffer

This verifies negotiation without triggering another approval: a **2%** discount stays inside Alpha's 5% Bronze ceiling.

1. As **Rep A**, create a quotation for **Alpha Traders**, title `Demo – negotiation`.
2. Add **Wireless Keyboard & Mouse Kit** (`KBM-STD`), quantity 1, discount 0.
3. **Save terms** → **Submit for approval** (within policy) → **Adopt terms** → **Share customer portal**.
4. Switch to **Alpha Buyer** → open the new quotation (**Q-1002**).
5. Click **Ask for a discount**.

6. Enter **2** in **Discount you are asking for on the whole quotation**.
7. Add a **Why?** message, e.g. “We can commit this quarter.”
8. Click **Send the proposal**.

> ✓ **Expected:** confirmation that the proposal was sent. The quotation becomes **version 2** and the total is 2% lower. The customer cannot accept yet; the terms are not agreed until the seller adopts them.

9. Switch to **Rep A** → **Q-1002** → **Conversation** tab.

> ✓ **Expected: Customer conversation** shows the counteroffer against the exact version. The action is **Adopt these terms**; the action bar deliberately hides Adopt for a customer-proposed version.

10. Click **Adopt these terms**.

> ✓ **Expected:** toast “Customer terms adopted”. Because 2% is inside policy, no new approval step should appear. If one does, approve it before continuing.

11. Switch to **Alpha Buyer** → **Q-1002** → **Accept & confirm** → **Yes, accept these terms**.

> ✓ **Expected:** order **SO-1002** and invoice **INV-1002** are created.

> **Extra check:** open the **History** tab on any quotation. You should see every version newest first, the audit trail, and **What changed?** for a line-by-line comparison between versions.

4 Cross-screen verification

Deal health

1. As **Finance Ops** or **Admin**, open **Deal health**.
2. Click **Run the sweep now**.
3. Inspect the existing low-stock alert for `LAPTOP-14` (**EAST**).

> ✓ **Expected:** alert cards show a readable sentence plus labelled fields (Available, Reorder point, Suggested order), not raw JSON.

4. Optional resolution loop:
   - **Inventory** → **Record a receipt**
   - Product **Business Laptop**, variant **14"**, warehouse **EAST**
   - Movement **Receipt — goods arrived**, quantity `2`, note `Demo replenishment`
   - Click **Record movement**
   - Run the health sweep again and filter **Resolved**.

> ✓ **Expected:** the low-stock alert moves to **Resolved**.

Discount policy

Open **Discount policy** and verify:

Setting	Value
Tier ceilings	**BRONZE 5%** · **SILVER 10%** · **GOLD 15%**
Category ceilings	**HARDWARE 15%** · **SERVICE 10%** · **SUBSCRIPTION 10%**
Manager triggers	Any positive excess · aggregate discount above 12% · margin below 20%
Finance triggers	Worst line at least 8pp over · weighted excess at least 3pp · excess value at least ₹5,000 · margin below 15% · non-positive line contribution
Version history	Version 1 is immutable; every saved quotation is judged against the policy in force at submission.

Reports

- **Sales report** shows **Q-1000**, **Q-1001** and **Q-1002** in the quotation table.
- **Pipeline by stage**, **Revenue by category**, **Top products** and **By salesperson** render.
- The export downloads the same rows the screen shows.

Notifications and live updates

- Submit a quotation as Rep A and watch Manager A's bell without refreshing — the native WebSocket should deliver it.
- The header **Live** badge should read connected.
- Open the bell → **Notifications** → mark one as read.

Customer-side extras

- **Catalogue:** add an item → **Request a quotation** → fill "What is this for?" → **Send the request**. A real draft quotation appears for the rep to price.
- **Account:** change contact details or preferences. Changing the password requires the current password.

5 Permission and negative checks

These prove the UI is not merely hiding controls: eligibility and authority are enforced by the server and explained by the interface.

1. **Rep cannot approve.** As Rep A, open **Approvals**; there is no **Decide** action for manager or finance steps.
2. **Manager cannot edit terms.** As Manager A, open **Q-1000**; Save, Submit and Adopt are disabled with a reason such as "Your role can read this quotation but not change its terms."
3. **Finance cannot skip step 1.** Already verified in Phase 2: the step is visible but locked with a reason.
4. **Duplicate submit is blocked.** After any submission, the button reads **Submitted** and is disabled.
5. **Customer never sees internal figures.** On any customer deal room, search the page text for "margin", "contribution", "cost", "ceiling" — none are present.
6. **Order lock.** Once an order exists, the quotation can no longer be edited, adopted, shared or cancelled from the workspace.

7. **Returned approval.** Optional: submit a quotation and have the manager choose **Return for revision** with a reason. The rep sees the returned status and must save and submit a new version; a fresh approval chain is created.

> **Do not run the Playwright suite while learning.** It creates quotations, approvals and orders outside the UI and will refill the database, making the walkthrough harder to follow.

Expected end state

If you complete Phases 1–3, the workspace should contain these records.

Quotation	Path	Result
Q-1000	Within policy → adopt → share → accept	**SO-1000** → **INV-1000** → **PAY-1000** → dispatched shipment
Q-1001	30% SETUP → manager → finance → adopt → share → accept	**SO-1001** → **INV-1001**
Q-1002	Customer counteroffer → seller adopts → customer accepts	**SO-1002** → **INV-1002**

VISIBLE PROOF

- Three confirmed orders, each with a shipment.
- Three one-time invoices and at least one recorded receipt.
- Low-stock alert resolved if EAST stock was replenished.
- Reports show all three quotations.

WHAT WAS VERIFIED

- Server-side pricing and policy checks.
- Manager then finance approval sequencing.
- Customer negotiation and exact-version acceptance.
- Order gates, invoicing, payment and dispatch.

If you need to start over

Ask for the reset again. A backup of the pre-reset database is stored at:

`C:\Users\rajak\AppData\Local\Temp\opencode\demo-before-reset-20261111-181711.dump`

The one rule to remember: the **Next workflow step** banner on every quotation tells you exactly who must act next. If a screen looks stuck, read that banner and the disabled-button reason before changing anything.

DealFlow360 · Demo Verification Walkthrough · 11 November 2026
